

Challenge Develop a Responsive Web Page Using Bootstrap

Challenge

- Develop a Responsive Web Page for Modernizr

Develop a Responsive Web Page for Modernizr

Transform the existing page design into a responsive page design, so that the company's web page is mobile responsive and tab responsive using the Bootstrap framework.

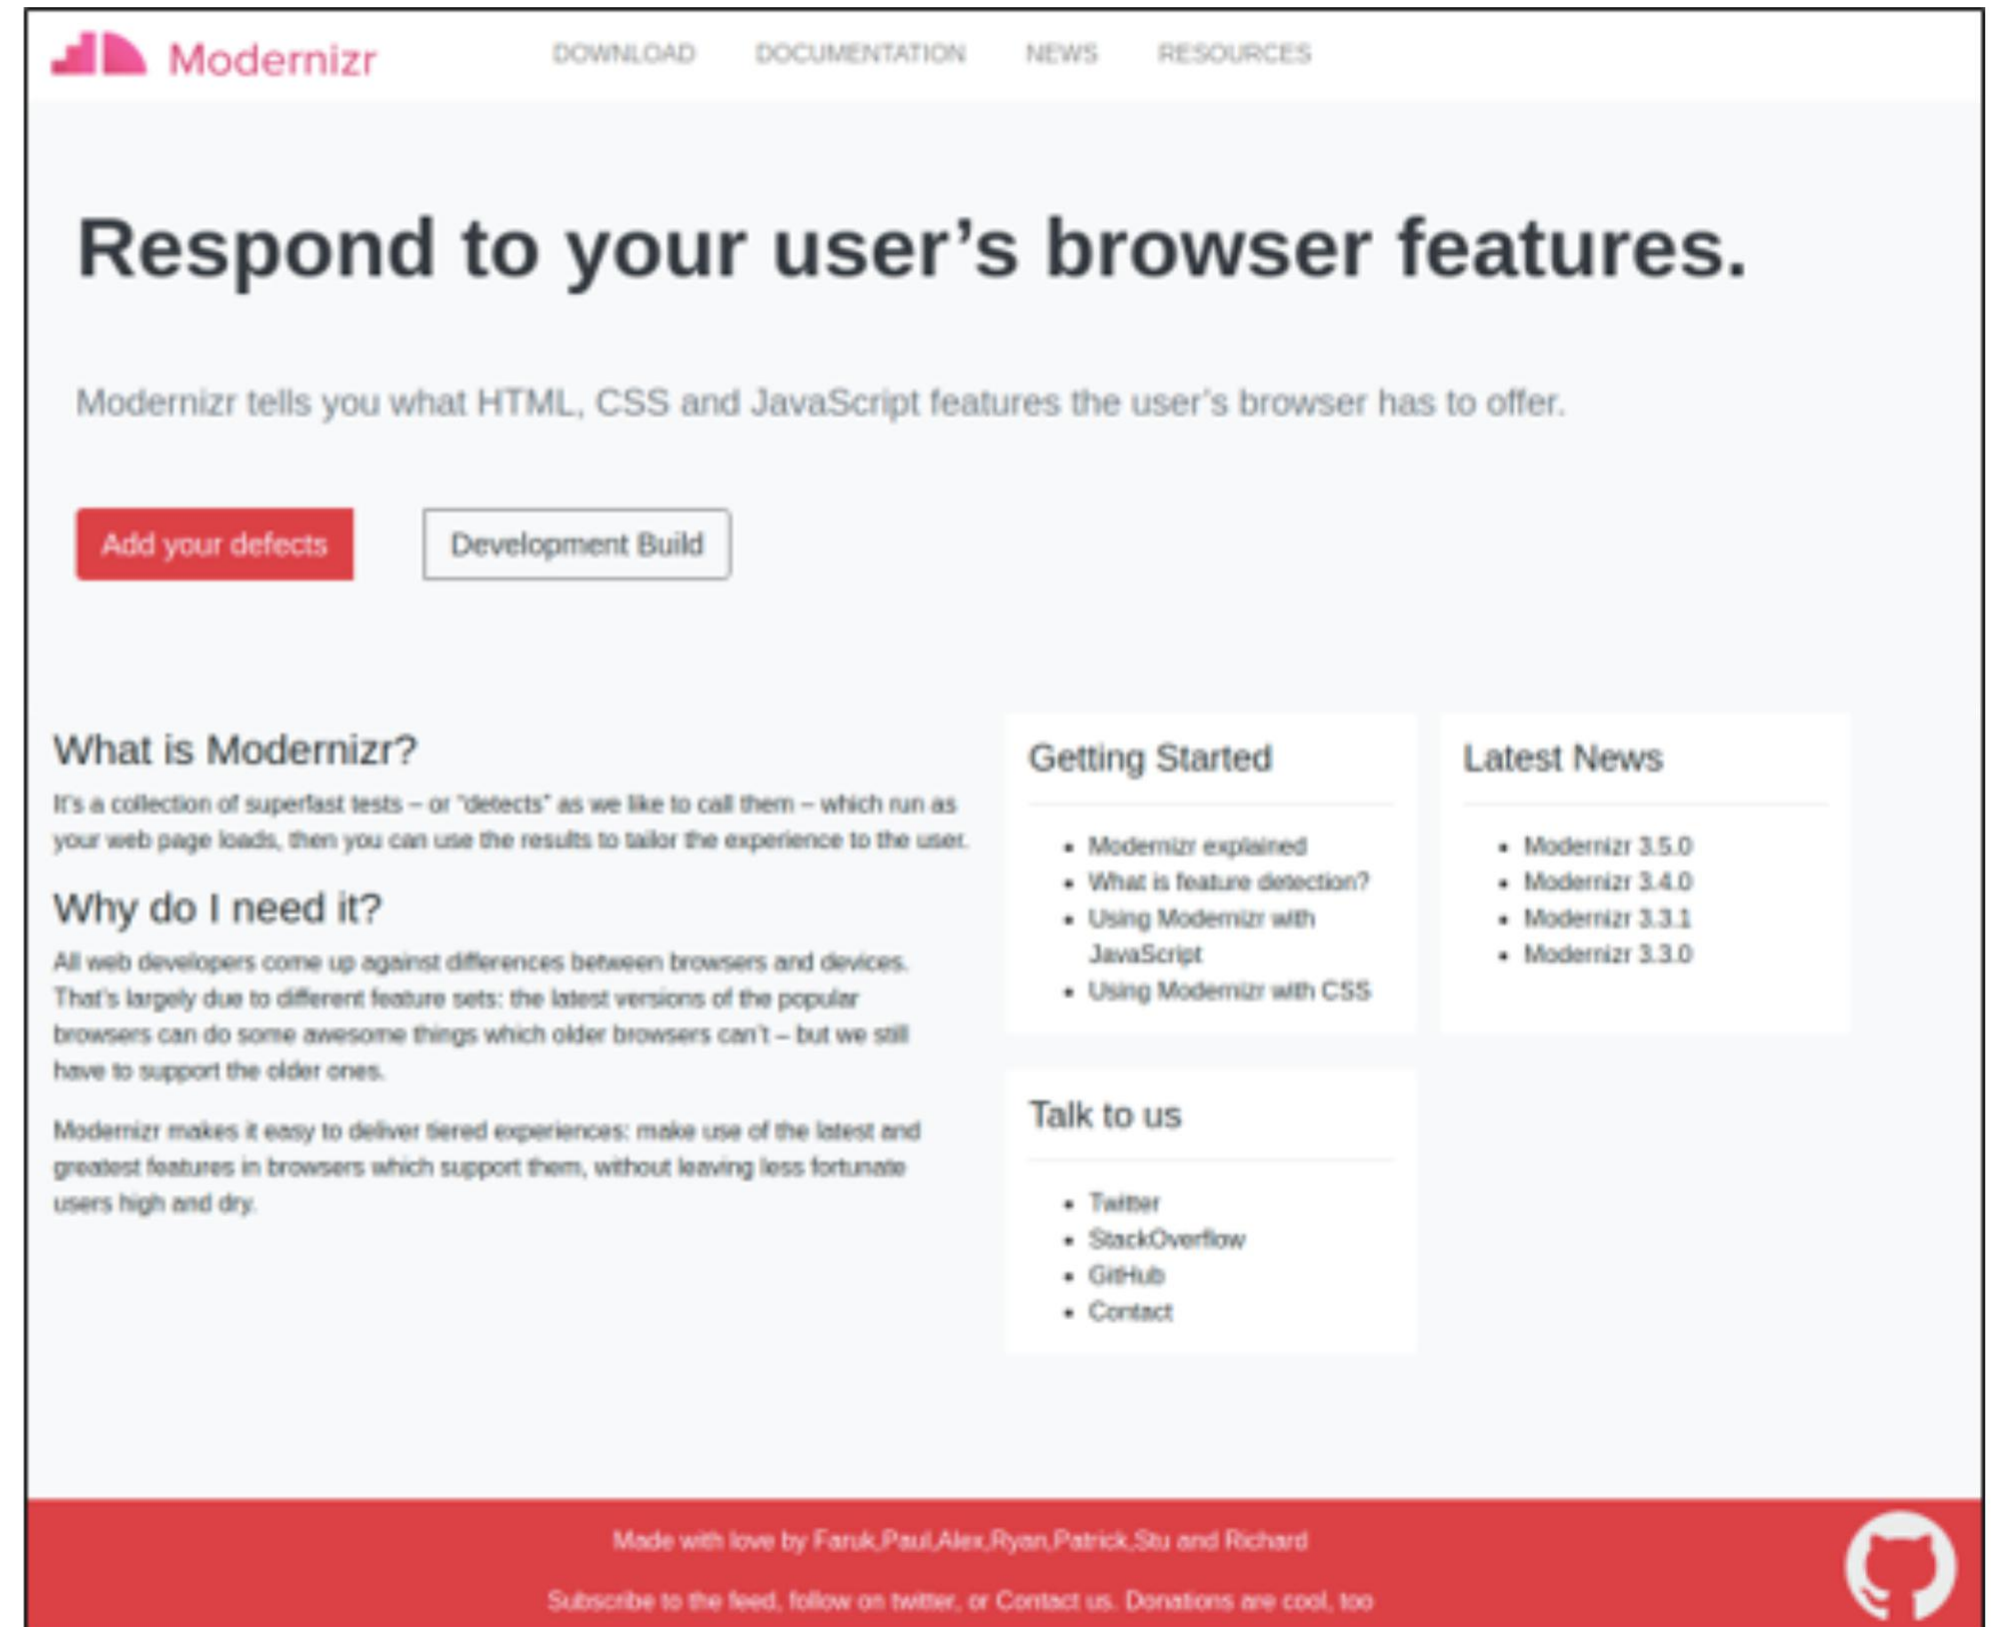

The boilerplate contains the intended sample output as image files for the desktop, tab and mobile devices.

CHALLENGE

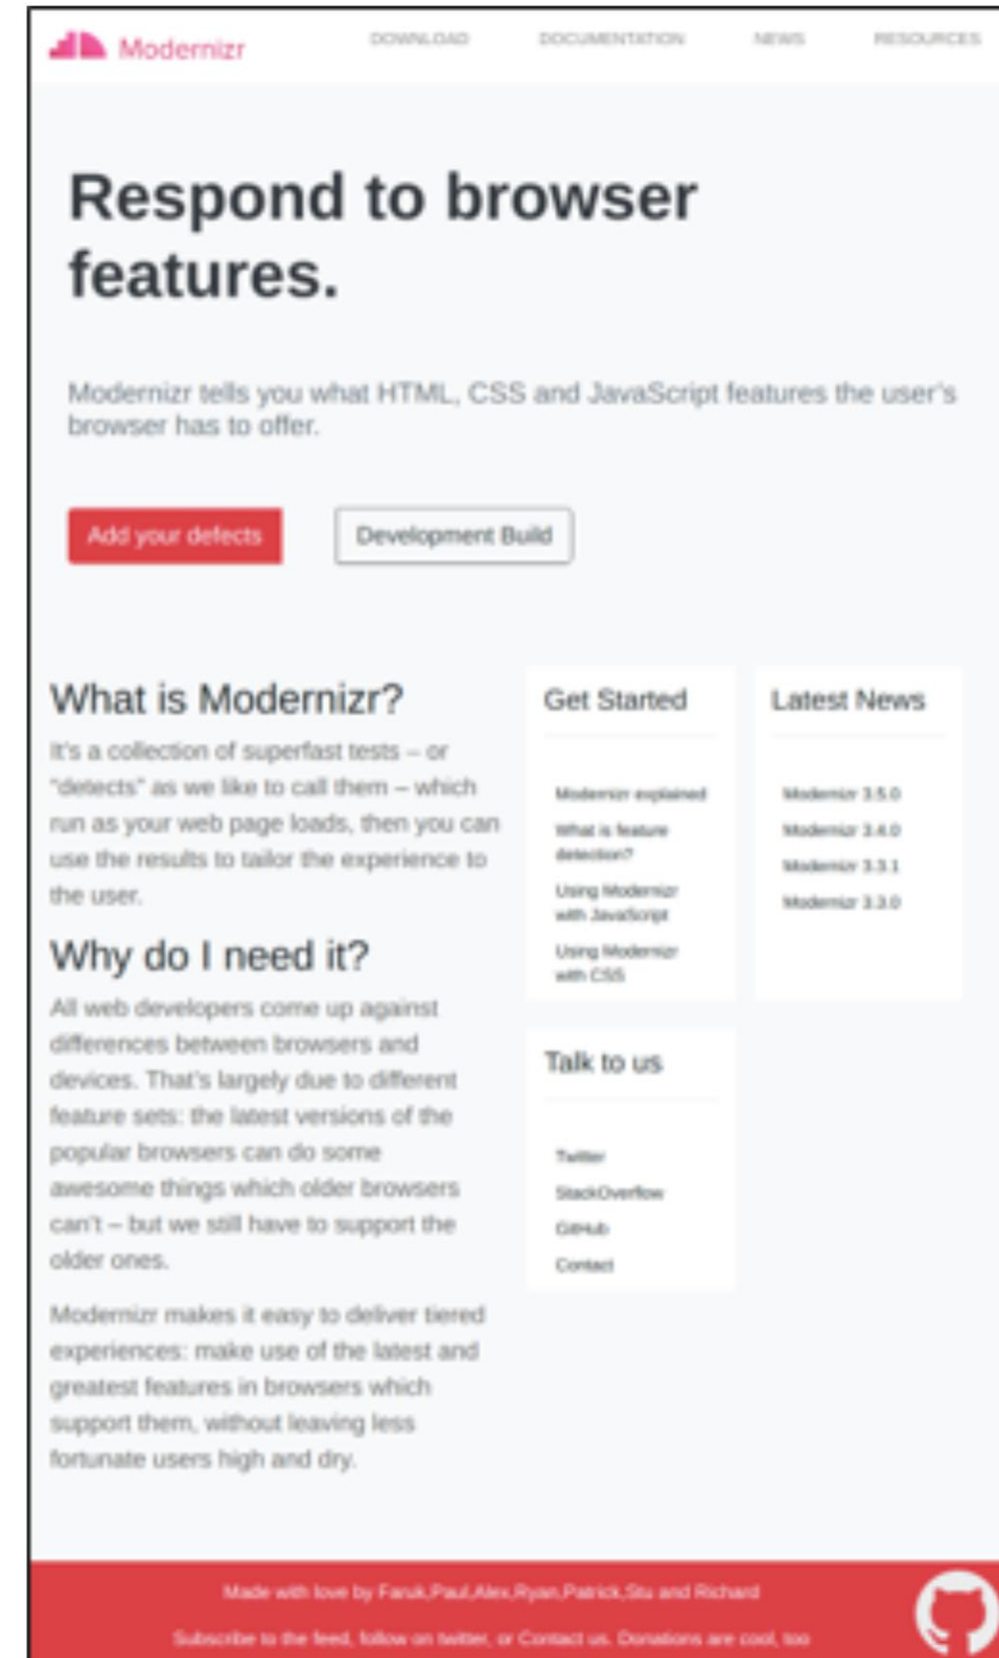

Expected Output: Desktop View

[Click here](#) for the desktop view of the web page for better clarity

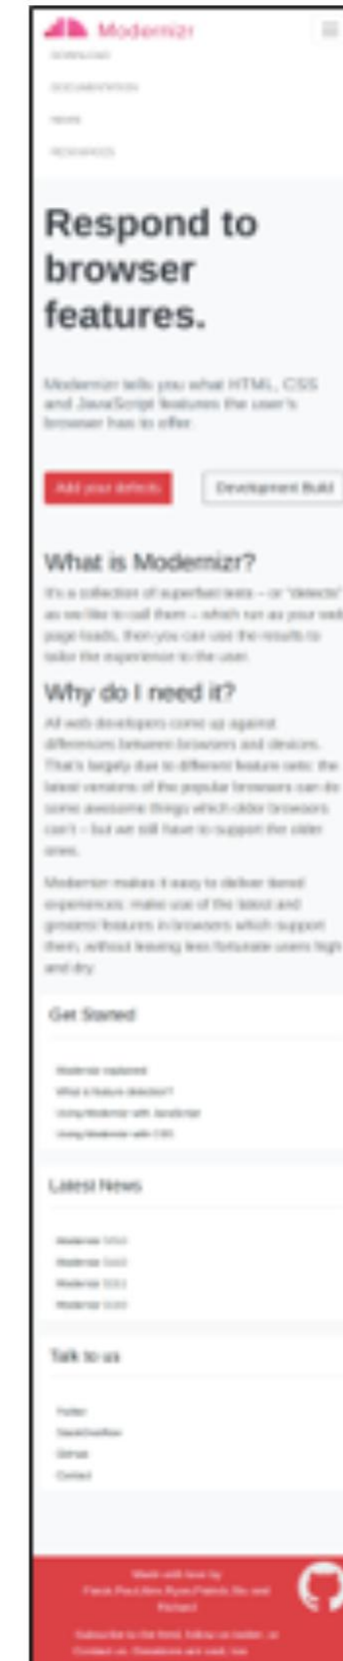

Expected Output: Tab View

[Click here](#) for the tab view of the web page for better clarity

Expected Output: Mobile View

[Click here](#) for the mobile view of the web page for better clarity

Points To Remember

- The solution for this challenge can be developed in 3 steps:
 - Step 1: HTML code should be written inside **index.html**
 - Step 2: Bootstrap CSS classes should be added inside the **index.html** file to style and make the web page responsive for desktop, tab and mobile devices.
 - Step 3: The custom styles should be added to **style.css** located in the **css** folder of the boilerplate code.
